

**AMENDMENTS TO THE CLAIMS:**

Claim 1 (Currently amended): A dispenser of plastic bags, comprising:

- a substantially smooth front panel defining a top, bottom and middles sections of the dispenser container, wherein the front panel includes an access opening for accessing the plastic bags and a funnel-shaped aperture extending into the dispenser; and
- a rear portion coupled to the front panel to form a housing of the dispenser.

Claim 2 (Original): The dispenser of claim 1, wherein the front panel includes substantially rounded corners.

Claim 3 (Original): The dispenser of claim 1, wherein the front panel includes no sharp bents.

Claim 4 (Original): The dispenser of claim 1, wherein the front panel is made from a sheet of metal.

Claim 5 (Currently amended): The dispenser of claim 1, further comprising wherein the front panel comprises a protective guard defining the funnel shaped aperture at the access opening.

Claim 6 (Currently amended): A container for storing and dispensing plastic bags, comprising:

- a housing having at least one aperture for plastic bags, the housing comprising:
  - a front panel made from a metal;
  - side panels made from a plastic material; and
  - a separate mounting member extending between the side panels for facilitating assembling the metal front panel to the plastic side panels.

Claim 7 (Original): The container of claim 6, wherein the mounting member is adapted to receive a fastener for attaching the side panels to the mounting member.

Claim 8 (Original): The container of claim 7, wherein the fastener is a screw.

Claim 9 (Currently amended): The container of claim 7, wherein the mounting member includes a funnel shaped structure defining the aperture hole adapted to receive the screw.

Claim 10 (Original): The container of claim 7, wherein the fastener is an adhesive material.

Claim 11 (Currently amended): The container of claim 7, wherein when the side panels are attached to the mounting member, the side panels clamp the front panel in place with respect to the side panels without fastening the front panel to the side panels.

Claim 12 (Original): The container of claim 6, wherein the side panels include grooves extending along the periphery of the side panels, the grooves adapted to receive side edges of the front panel.

Claim 13 (Currently amended): ~~The container of claim 1, wherein~~ A container for storing and dispensing plastic bags, comprising:

~~the a housing defining a storage space, an access opening, and the housing having a~~  
funnel-shaped aperture for insertion of the plastic bags into the container, wherein  
a wide end of the aperture faces the outside of the container and a narrow end  
faces the storage space.

Claim 14 (Original): The container of claim 13, further comprising a bracket having the funnel-shaped aperture.

Claim 15 (Original): The container of claim 14, further comprising a panel having an opening, wherein the bracket is positioned relative to the opening such that the wide end of the aperture faces the opening.

Claim 16 (Original): The container of claim 13, further comprising a panel having the funnel-shaped aperture.

Claim 17 (Currently amended): ~~The container of claim 1, wherein~~ A container for storing and dispensing plastic bags, comprising:

a front panel having an access opening;

a the rear portion comprising ~~comprises~~ a one-piece panel having a rear panel and side panels, wherein the side panels are foldable relative to the rear panel; ~~and~~  
wherein the front panel is assembled to the one-piece panel to form a housing.

Claim 18 (Original): The container of claim 17, wherein the one-piece panel is made of a plastic material.

Claim 19 (Original): The container of claim 17, wherein the one-piece panel includes a scored section to facilitate folding the side panels relative to the rear panel.

Claim 20 (Original): The container of claim 17, wherein the side panels include grooves adapted to receive the front panel.

Claim 21 (Currently amended): A container for storing and dispensing plastic bags, comprising:

a ~~metal~~ front panel defining a top, bottom and middle sections, wherein the ~~metal~~  
front panel having an opening for accessing the plastic bags and a protective guard defining a funnel-shaped aperture for inserting the plastic bags;

~~a protective guard at the opening;~~ and

a rear portion coupled to the front panel to form a housing of the container.

Claim 22 (Currently amended): The container of claim 20, wherein the ~~metal-front~~ panel has the aperture opening at the top section.

Claim 23 (Currently amended): The container of claim 20, wherein the container has a flat profile such that as plastic bags are inserted through the aperture opening the bags are stacked in an organized fashion.

Claim 24 (Previously presented): The container of claim 20, further comprising means for mounting the container to a vertical surface.

Claim 25 (Withdrawn): A process of assembling a container for storing and dispensing plastic bags, comprising the following steps:

providing a metal front panel and a plastic one-piece panel having a rear panel and side panels foldable relative to the rear panel;  
folding the side panels relative to the rear panel; and  
clamping the side panels to the front panel.

Claim 26 (Withdrawn): The process of claim 24, wherein the clamping step further comprises the steps:

providing a mounting member; and  
attaching the side panels to the mounting member such that the side panels clamp the front panel.

Claim 27 (Withdrawn): The process of claim 25, wherein the clamping step further comprises the step of providing the side panels with grooves adapted to receive edges of the front panel.

Claim 28 (Withdrawn): The process of claim 24, further comprising attaching the front panel to the rear panel.

Claim 29 (Withdrawn): The process of claim 24, further comprising attaching the front panel to the side panels.
